

Effect of Horticultural production (crops) on Increasing Jobs the Incon and employment in Iran

A.A.Bashir Azami

From the earliest time until now the human being for getting his daily needs and finding foods has tried very much and he has faced many troubles for making facilities for his feeding up to this time. The primary human could have reached many ways for enjoying in many basis crossing historic of periods and bounding in many industrial parts and technology and he has used these instruments and technical possibilities in producing and settlement of many needs of society. So now in our advanced world technology and science are in the position of body practicing. In this 5% of countries in world produce the 65% needs of all countries in the world and this shows with many undevelopment. Countries they don't have the sufficinet knowlidge for using many possibilities in producing in recent years he has reached in distinguishing of many coultivars and varieties of many species. The gardening products have settled the majarities of human's needs and if we have enough knowledge for making facilities for making profits and jobs we can increase our national incomes. 80 correcting the base forms of gardens farms, making plantation specialized, producing by using advanced technoloyies, reforming the surface of plantations and using correct methods for correcting dust, cultings and useful plant pathology, harvesting, etc. are the important items that we present.
