

The Study of the yielding and adaptability of strawberry cultivars in kardistan conditions.

Mohammad Sarsaefi

Agricultural Research Center of kurdistan

This research was conducted to study on yield and quality of Strawberry for introducing the best cultivar under kurdistan Conditions.

In this experiment sixteen cultivars of Strawberry were evaluated in a randomized complete block design with three replications.

This study was conducted for three years (1995 - 1998) at Greazea agricultural research station.

Then analysis of variance carried out and following results obtained.

- 1- The effects of years Were highly significant.
- 2- The effects of treatments were highly significant.
- 3- The effects on interaction (years * Var) were Significant.

and at last Fresno and Missionary and Number 14 cultivars were selected.
