

The position of horticulture in new education dicipline of high-school

N. Shainsazar

Dept. of Education, Ministry of Agriculture, Karaj.

A part of food which is necessary for the people usually are supplied via the horticultural crops. This is important to employ educated people for managing the horticultural industry with the aim to increasing the horticultural products. Therefore, the department of education have a special position due to the role of education in providing of educated people for horticultural sectors.

Unfortunately, horticultural education at the higher education level have been failed to provide enough, well trained and professional graduates to this section of agriculture. Therefore, in this regard, people involved in high school education of the country have decided to introduce new disiplines for education of students at high school level of technical and professional in agriculture.

In this paper the position of horticulture in new education discipline at high school level of technical and professional field discussed based on the statistics and information related to the quantity and value of exported various horticultural products.
