

Study of Potensial of Mariginal space of highway for developing of green space.

Dr.M.Kafi.

One of most important way for transportation in all of the sities especially in Tehran are highways. The high concentration of air and sound pollution in these environment's promol expense of urbon desinged for desining of them for progress of green spaces asw a biloligical filters.

In this research highways of Tehran divided to five section: northern, southern, eastern, western and central. one years study of structure and teature of these spaces was shown seven years of space are exist. In this paper I want explain all of methods of progress of flower and ornamental tree and shrub in these typs.
