

## **Investigation of chlorosis of planta leaf**

**T.Mouhammadi, P. Afshin, S.Kobraie**

Leaf chlorosis is one of the most important disease in Iran. This disease has more severity in Esfahan province. In this experiment the effects of climatic and soil conditions on incidence of leaf chloriosis and the mean and ways of its control are studied. The other factor like air polution and improper use of pesticides are also considered. It is concluded the plant physiology affects leaf chlorosis as well.
