

Study of Narvan weed eating and its control.

T. Mohammadi, K. Shams, S. Kobraei, D. Eradatmand.

developing of green area is one of the most important objective in industrial communities. This problem is more clear when clear that air pollution in these areas is increases. thus Narvan tree is the best tree for developing green area. but this tree is affected by several pests, among which wood eating beetle is the most important one.

In this study the following tropic are investigated:

- 1) study of the most important order of this beetle.
- 2) identification of its species.
- 3) study of its life cycle
- 4) study of micellanous control measures.
- 5) the role of I.P.M in controlling of this beetles.
