

## **The effects of cutting collection time on rooting of the olive cuttings (c.v. Yellow)**

**A. Aboutalebey**

Dept. of Horticulture, College of Agriculture, Islamic Azad University , Jabrom.

In this experiment in order to determine the effect of cutting collection time on rooting of Yellow olive cuttings, the leafy cuttings of this cultivar were prepared on February , April and July and were planted in a green house under mist Condition.

After 75 days, the results were analyzed statistically for following factors:

Percentage of rooted and vital cuttings, number, diameter and dry weigh of the roots per cutting.

results showed that the best time for preparing cuttings is early summer.
