

Investigation of intercropping of date palm in the province of Busheher

H.Mivechei Langerudi

Boushehr Agriculture Research Center , Borazjan.

Data palm is the main crop of the Busheher province. This province has 25000 hectares which are included of four millions date trees. The plants are usually spaced at 8-12m. In this space the farmers of different areas in this province cultivate the other plants. For example, in location of Mazarei and Dalaki, tommato , egg plant and the other vegetables, in the Jam and Ris location lime , grape , fig and pomegranate and in Deshtestan location wheat, barley, watermelon and alfalfa are cultivated.
