

Essential problems for development of olive plantation in Iran

M.Tabatabaei

Deputy of Horticulture, Ministry of Agriculture, Tehran.

To get the real independence no other was as to produce more and more and achieve to a self satisfaient. Olive oil is one of the products that have strategic importance. I has alimental and medical characteristics and is one of the best oils.

Iran has a good potential of olive cultivation development.

Development of olive cultivation requieres to pay special attention to the following points:

- 1- To study the environmental requirements of olive trees.
- 2- To find out essential problems and attempt to solve them.
 - a: Having knowledge of olive plantation and then train olive growers.
 - b: To identify cultivars and clones.
 - c: Providing enough land and water
 - d: Propagation of selected cultivars and to determine the exact place for it.
 - e: Concurance between olive and other economic agricultural crops.
 - f: To recognize socio-economical problems, attempt to solve them and to attract local people contribution.
 - g: Mechanization and processing of olive.
 - h: Technical and financial aids of government.
 - i: Stablshing a stable agriculture to garanty the future of olive growers.
 - j. Serious and intimate collaboration of different responsible organization.
