**An investigation of biological characteristics of sawfly leaf miner  
(*Eenusa ulmi sunderall*) in Iran**

**M. Abaei**

**Plant Pests and Diseases Research Institute, Tehran**

The sawfly leaf miner was collected of leaves of elm trees in plant pests and diseases research institute area and identified for the first time in Iran. It has been reported from North of America, Kaukasus, Armenia and Europe.

This pest, feeds on leaf epiderm. Damaged leaves loose their chlorophylle and seem yellow.

*In this paper, morphology, biology and damages of this pest have explained.*
